

Sohit Sahu

Cloud and DevOps Engineer

Noida, Uttar Pradesh • Open to Relocation • +91 8737810375
sohitsahu725@gmail.com | LinkedIn | Portfolio | GitHub

Professional Summary

Entry-level DevOps and Cloud Engineer specializing in AWS, Kubernetes, and Terraform-based IaC. Hands-on experience building GitOps CI/CD pipelines and multi-AZ EKS clusters with Prometheus/Grafana monitoring — seeking to bring production-grade automation to a DevOps, Cloud, or SRE team.

Core Technical Skills

Cloud Platforms (AWS): EC2, VPC, S3, IAM, EBS, Route 53

CI/CD and GitOps: Jenkins, GitHub Actions, Argo CD, SonarQube, Git, GitHub

Containers and Orchestration: Docker, Kubernetes, Amazon EKS, Helm, Amazon ECR, Microservices Deployment

Infrastructure as Code (IaC): Terraform (Modules, Remote State, State Locking), CloudFormation, Ansible

Monitoring and Observability: Prometheus, Grafana, Amazon CloudWatch, System Health Monitoring

Networking and Security: Subnetting, Security Groups, NACLs, NAT Gateway, Application Load Balancer (ALB)

Operating Systems and Scripting: Linux (Ubuntu, RHEL), Windows, Python (Boto3), Bash Scripting

Work Experience

Davine Technologies

DevOps Engineer Intern

Remote

July 2026 – Present

- Containerized internal applications using Docker and maintained baseline Dockerfiles, standardizing builds across environments.
- Automated CI/CD deployment workflows for staging using GitHub Actions, replacing manual release steps with tested pipelines.
- Managed AWS resources (EC2, S3, IAM) and monitored infrastructure health through Amazon CloudWatch alerts.

DevOps and Cloud Infrastructure Projects

E-Commerce DevOps Implementation on AWS EKS

GitHub

- Provisioned a multi-AZ Amazon EKS cluster with custom VPC networking using modular, reusable Terraform IaC, eliminating single-AZ failure risk.
- Built a GitOps workflow (GitHub Actions + Argo CD) that syncs cluster state with the Git repository on every commit.
- Deployed microservices via Helm with rolling updates, enforced IAM Roles for Service Accounts (IRSA), and monitored cluster health with Prometheus and Grafana behind an ALB Ingress.

End-to-End CI/CD Pipeline with Jenkins and Kubernetes

GitHub

- Built a declarative Jenkins pipeline (Groovy) automating the full build-test-deploy lifecycle.
- Enforced an 80% code-coverage quality gate via SonarQube, automatically blocking builds that fell below threshold.
- Reduced Docker image size using multi-stage builds and deployed to Kubernetes via secure, Jenkins-managed kubeconfig credentials.

Automated Cloud Cost Optimization System (Serverless)

GitHub

- Engineered a serverless AWS Lambda function using Python and Boto3 to identify and delete orphaned EBS snapshots, reducing idle storage cost.
- Scheduled fully unattended daily execution via Amazon EventBridge cron triggers, eliminating manual snapshot cleanup.
- Scoped the Lambda IAM execution role to least-privilege permissions, limiting access to only the required actions.

Multi-Tier VPC Infrastructure with Terraform

GitHub

- Designed a multi-AZ VPC with public and private subnet isolation using reusable Terraform modules for repeatable infrastructure provisioning.
- Configured Application Load Balancer (ALB) health checks with EC2 Auto Scaling for automated failure recovery, using S3 and DynamoDB for remote state locking.

Education

Bundelkhand University

Master of Computer Applications (MCA)

Jhansi, Uttar Pradesh

August 2023 – July 2025

Bundelkhand University

Bachelor of Computer Applications (BCA), Honours

Jhansi, Uttar Pradesh

August 2020 – June 2023

Certifications and Training

- AWS Cloud Practitioner Essentials – Training Completion Certificate, AWS Skill Builder
- AWS Networking Basics – Digital Badge, AWS Skill Builder
